This game reminds me of Case Animatronics, but that's ok, The atmosphere is not bad, and good thing there is no loud SFX that disrupts your ear health, let's come to cons, The AI Robot girl is annoying, There are too many door keys, The station is too big, there is no much interesting puzzles

6.5/10, You can give a chance to this game!

. Well it's a Puzzle game, you will get jumpscared the first time then it becomes an annoyance!

The first half of the game is a puzzle solving game, until you meet the android.

I suggest you get a good headphone to listen to the footsteps and evade the Robot, in some parts the footsteps are everywhere so you won't be able to predict where the robot is so you will have to GO FOR IT and hope for the best.

The sounds are fine, the music is fine, there is one part of the game that you will hate so much because you would be required to do a lot with no check points in between.

I hated the ending so much.

The price is reasonable but I was expecting more *THAT ENDING*

You can check my gameplay here
